HANDYFORM

Bench Tops

10 x 10

HYDROBAN™ bench tops are manufactured using a single sided white melamine 33mm moisture resistant particle board, for both our postformed and timber edge bench tops. Our postformed benchtops feature a recess beneath the roll so that the surface of the laminate underneath is flush with the melamine surface. This provides a range of benefits for both user and trade alike.

180°

HYDROBAN™ FEATURES:

- ◆ Underside of the bench top is sealed with a white melamine surface which provides a number of benefits including:
 - the white surface reflects more light in cupboards particularly in back corners
 - it matches the standard white melamine finish used in cupboard interiors
- ◆ No added sealer required:
 - over dishwashers
 - under serveries
 - under breakfast bars
 - for the underside of bench tops used for cupboards in food preparation areas
- ◆ Under roll of laminate recessed to provide a flush surface, which aids fitting and general finish
- ◆ 180°, 10 x 10, 5 x 5 and 135° feature postformed rolls with anti-drip edges.

Lambs Tongue
(135°)

HYDROBAN™ TECHNICAL INFORMATION:

- ◆ Standard *HYDROBAN™* benchtops have the horizontal surfaces hot pressed with an environmentally friendly crosslink PVA glue. The profile is processed through the Homag Flowthrough Postformer using a purpose specific environmentally friendly PVA glue.
- ◆ The white melamine underside counteracts the tension created by the laminate to prevent bowing of the benchtop
- ◆ Where the laminate is rolled under a *HYDROBAN™* bench top the melamine surface is removed from the board to:
 - provide the correct bonding surface for the PVA glue
 - recess the laminate so that the laminate is flush with the melamine finish on the underside
